Product Overview

We, NOHKEN INC., has plenty of experience with capacitance level sensor for more than 30 years, and we consolidate all experience into CG400 series. CG400 series employ phase detection principle which the changing of resonance frequency is processed by microprocessor (digital circuit) and the changes in capacitance value is detected by changes in frequency value.

Principle of Operation
The basic oscillator circuit is of the parallel resonance circuit with L (coil) and C (capacitance between the electrodes). The oscillation frequency (f) of this circuit is: \( f = \frac{1}{2\pi} \sqrt{LC} \). The frequency without material around the sensor (f1) is: \( f_1 = \frac{1}{2\pi} \sqrt{LC} \), where C is the capacitance without material around the sensor (zero point). With material around the sensor, the capacitance increases (C+\( \Delta \)C), and the frequency (f2) is: \( f_2 = \frac{1}{2\pi} \sqrt{L(C+\Delta C)} \), where C+\( \Delta \)C is the capacitance with material around the sensor (span point). The sensor detects the frequency change from f1 to f2, and gives output (4 to 20mA) corresponding to the change. With the incorporated microcomputer, offset of output current and reversed output signals for ZERO/SPAN points are also available.

![Diagram of capacitance level sensor](image-url)
Features

- **Easy Adjustment**
  ZERO and SPAN points are set by one push button.
  When the medium inside the tank is changed, adjusting one given point, and the sensor automatically calculates and outputs ZERO and SPAN values.

- **Wide range of sensitivity**
  The sensitivity is 30 to 2000pF.
  The sensor can be used in a wide range of applications without changing the circuit board.

  **Example**
<table>
<thead>
<tr>
<th>Medium</th>
<th>Dielectric Constant</th>
</tr>
</thead>
<tbody>
<tr>
<td>Kerosene</td>
<td>2.8</td>
</tr>
<tr>
<td>Ammonia</td>
<td>15 to 25</td>
</tr>
<tr>
<td>Isobutyl Alcohol</td>
<td>18.7 to 31.7</td>
</tr>
<tr>
<td>Methyl Alcohol</td>
<td>33 to 56.6</td>
</tr>
<tr>
<td>Water</td>
<td>48 to 80</td>
</tr>
</tbody>
</table>

- **Insensitive to buildup and noise**
  The sensor may not be affected by resistance of build up due to the phase detection principle.
  The sensor also may not be affected by the noise because it measures the resonance frequency.
  If the sensor is affected by buildup or noise, it automatically selects reasonable data, and outputs the signal correctly.

- **Improvement of function for buildup**
  The operational principle is different with conventional principle for detecting changes in voltage (frequency).
  The sensor may not be affected by resistance of adhesion due to the detection of changes in capacitance value to changes in frequency.

- **No need to adjust in actual liquid**
  The sensor shall operate normally to input same setting data in same detecting condition and same device.
  It is strong point for digital parameter setting.

**Display**

- **Mode key**
  Switches adjustment modes. Cancels entry.

- **Enter key**
  Accepts or saves entry.

- **Up key**
  Scrolls modes, values, paramaters.

- **Down key**
  Scrolls modes, values, paramaters.

- **Mode area**
  Displays current mode.

- **Unit area**
  Displays unit.

- **Value area**
  Displays measured or set value or parameter.

- **Maintenance mode area**
  Displays maintenance mode or parameter.
### Specifications

**CG400 (CE Marked) series, Integral Type, Two wire**

![Graph showing load resistance vs. power supply](image)

- Operating temperature: -20 to 60 °C for electrode (without dew), Heat proof up to 150°C is available as an optional
- Operating pressure: -25 to 65 °C for housing (without dew)
- Protection class: IP68 (Electrode), IP65 (Housing)
- Material: 304SS electrode, PFA insulator tube, ADC12 (Acrylic painting) housing
- Mounting: R 1" and JIS5K50A (STD), other size of thread and flange are available as an optional
- Cable entry: G 3/4" or equivalent
- Recommended cable: 2-core shielded cable (Outer dimension: approx. Φ10mm)

Note: The tensile strength of wire for CG400BHF and CG400BDHF is 9.8 N Max.
DECLARATION OF CONFORMITY

Manufacturer: NOHKEN INC.
(Head office) 15-32, Hiroshima-cho, Suita-city, Osaka 564-0052, Japan
(Factory) 501-52, Hokusimamiiyanomae, Sanda-city, Hyogo 669-1313, Japan

Product Category: Electrical Equipment for Measurement, Control and Laboratory Use (Industrial Location)

Product Name / Model: Continuous Capacitive Level Sensor
Model: CG400

We declare under our sole responsibility that the products mentioned above the provision of Directive and Standard as required and stated below.
